

PreHCM Portal

WhiteSpot

Support for radio network expansion in Germany

The central exchange platform for the closing of WhiteSpots

Using the PreHCM portal and its WhiteSpot module is ideal for ensuring full radio coverage in all areas

- Standardized and transparent coordination process between German mobile network operators
- Reduced effort through automated processes and reporting
- Central data instance with coordinated workflow
- Simplification of documentation and research of project data

PreHCM Portal is in use at MNOs

The use of the PreHCM portal as a central data instance and ideal workflow support simplifies everyday work in the mobile environment. The modular structure additionally offers high scalability.

Automation improves quality

Automated interfaces serve to shorten throughput times. Media discontinuities in the process are thus eliminated. Through the automatic provision of neutral reports, the status of projects can be easily viewed at any time.

State of the Art - Security

Safety requirements coordinated with all users and compliant with their requirements
